the precise shape of the face of themselves and others. The shape of the human face may be assessed by observing the volume of the face and projecting the volume of the face. FIG. 5 is a diagram illustrating the comparison of volumes obtained by projecting images of faces. In FIG. 5, the reference numeral 51 denotes a front face image, the reference numeral 52 denotes a profile face image, the reference numeral 53 denotes a right face image, the reference numeral 54 denotes a left face image, the reference numeral 55 denotes a 3D face image, and the reference numeral 56 denotes a rear face image. As can be seen from FIG. 5, although the volumes of the faces can be projected, the images do not actually reveal the specific shape of the face, but only an overall volume thereof. Further, the projected images may be captured in a dark or lit environment. If an image is captured under a dark environment, the projected image is reproduced in a dark image (e.g., the volume a1d647c40b
