SkyNX is a lightweight utility that enables you to stream PC games to Nintendo Switch in your local network without Android. Requirements: •Windows 10 (Build: 10240) •Nintendo Switch Pro Controller Carpetfox is an application that allows you to control and protect your Nintendo Switch remotely. The benefits of using Carpetfox are wide and varied: •Enjoy playing on your Nintendo Switch with your friends without the need to bring the console with you. The console can be either placed on your desk or on your lap. •Access your console as a tablet. This is useful if you want to watch movies, videos or play games on your Nintendo Switch. •Stay in control of your console. You can power on, reset, hard reset, turn off and sleep your console whenever you want. •Get help when you need it. Carpetfox provides you with a comprehensive FAQ. •Get push notifications when new updates are available. •Find all your console's information. Like its name implies, Carpetfox is a deep dive into your console's information. •Get updates whenever you want. Carpetfox will keep you informed about updates, for example, to the current OS, a future firmware update, new games, firmware updates or future releases. •Stay protected at all times. Carpetfox protects your console by scanning it regularly for viruses. •Get help from Carpetfox itself. When something goes wrong, the application will alert you of possible issues and assist you in getting back to a safe state. •Carpetfox has a clean and simple user interface. Carpetfox Requirements: •Internet connection •A valid account at the Nintendo Switch Online service •A Nintendo Switch You can download the application from the Google Play store. For detailed information on using the application, refer to the Carpetfox User Manual. Create, connect, and broadcast your own Nintendo Switch HDMI Switch is the ultimate Homebrew application that lets you stream from any source using your Android tablet or smartphone as the wireless receiver, including your computer! You can even use a TV as a wireless receiver, although it isn't the best solution. Create and Connect to your Switch The first step is to set up your home media center to receive the streaming. HDMI Switch will automatically detect it and start streaming the games. If you don't have the required software installed, you can simply install

What's New in the SkyNX?

SkyNX is a lightweight utility that enables you to stream PC games to Nintendo Switch in your local network without Android. May require a bit of effort to establish the connection It is important to note that you need to pop out the Nintendo MicroSD card and connect it to your computer for this tool to work properly. In addition to the Windows app, you need to make sure that you copy the Nintendo app onto the root of the MicroSD card. Rest assured, that the app does not overwrite anything, but rather it places the files you need for the program to work in the location where both operating systems can read it. Once you are done with transferring the corresponding app, you can dismount the MicroSD and place it back into the Nintendo Switch. While not mandatory, you can consider installing the app to Nintendo if you want to have a quick access link to it on your home screen. Then again, if you prefer not to install anything, you can find and launch it from the Homebrew main menu. Once the app is launched, you should be able to view the IP address and you can type into the Windows app to create the connection. Configure the settings and you are set to go The interface is a more of a settings window where you can type in your IP address, set the streaming quality, swap A-B and X-Y buttons - depending on the game you are playing - and toggle audio and video. In case you are having problems with audio or video, you should check out the settings and make sure that all drivers are installed. You should bear in mind that in the end the quality of the stream ultimately depends on the speed on your Internet, but the range is between 4 and 20 Mbps. Therefore, if you have a decent connection, you may want to set it up to a middle level, otherwise lower or increase it as necessary. It is recommended that before the actual streaming you set the resolution of your screen to 1280 x 720, which is basically the same resolution as Nintendo Switch and hence, make sure you are not going to have too many troubles with the latency. Lastly, to get started with SkyNX, simply start up a game on your computer, which will start it Switch itself Description: SkyNX is a lightweight utility that enables you to stream PC games to Nintendo Switch in your local network without Android.
