I just used the GenerateProject from Microchip's Fusion 2.4 Beta to create a new project, and because I'm using the Original. #We'll be creating several 'Codes' in this example, but you can also use a single. This is my first C compiler. on DIPIC board and 8051 SIPIC C compiler.Q: Remove prefix from string containing number I'm trying to remove the prefix and suffix of a string that contains a number. So, for example, I would like to remove "979-5136" from "@979-5136" and would like to retain the 979. I have looked at many SO posts, but cannot figure out the optimal regex. I've had success using '(?P\d+)[0-9]\-\d{4}' in this case but I can't figure out how to remove the hyphen or the 4 digits at the end of the string. Thanks for your help! A: You may use Pattern pattern = Pattern.compile("^([0-9]{1,2}[0-9]\-[0-9]{3})"); Matcher matcher = pattern.matcher("@979-5136"); matcher.replaceAll(""); System.out.println(matcher.group(0)); See the Java demo. The regex matches ^ - start of the string [0-9]{1,2} - 1 or 2 digits [0-9] - a digit (same here as [0-9]+) - - a hyphen [0-9]{3} - 3 digits Q: Keeping the same row number after updating some values If I have the following table

id	type	name	value
1	unknown	test	1000
2	unknown	test	2000
3	unknown	test	3000
