A great entry in the game This game is really cool! I can't wait for it to be finished. The OST is one of the best I've seen yet. Almost all the music is in a re-interpretation style that is all its own. (I can't stand it when the music sounds like it was made for a game I've already played). The music is great. It fits the game well. I have a lot of fun listening to it. It is kinda retro but with a touch of new sound. I want a soundtrack like this for future games. Good to see a game with this kind of music and I'm looking forward to the soundtrack and the game. A good money investment. :) The OST is good. I like the music and the last track "I Am Alive" is a cool song. But the soundtrack doesn't meet my expectations of a Blazing Beaks soundtrack. I expected some techno/hip-hop or something like that (esp. the game looks like it's more of an action game rather than a platformer). Can't wait for the rest of the soundtrack. :) Maybe because I play too much Sonic IV Sega (which is like that on purpose) but I don't like the music in it. It's too loud and it doesn't fit with the atmosphere of the game. I tried this game once but I didn't like it either. Question is: will the soundtrack be released on 1 CD? Or is it split into 2 music CDs? I am not sure, but is it possible that a 2nd soundtrack is in process? OK, I ordered the soundtracks (thank you Alan for selling them, very nice to be able to buy the soundtracks, very nice! :D) and I just wanted to say that this time, I'm absolutely happy with the soundtracks, I love them. The OST is great, very good and
